EDUCATION

Western University

Bachelor of Engineering Science in Software Engineering

May 2023

- Dean's Honour List
- Major GPA: 3.7/4.0

EXPERIENCE

Bloomberg

2023 – Present

Software Engineer

- Currently fine tuning Qwen2.5-Coder for CI failure triage; building evals to measure fix accuracy and generalization
- Built a shared LLM library with structured output validation and retries; adopted company-wide across 300+ teams
- Championed an agentic LLM PR review bot identifying 84% of PR issues; built a tiered evaluation pipeline with automated scoring, regression gates, and sampled human review, catching 99.9% of regressions before release
- Owned the end-to-end development of numerous full-stack products and features, serving over 250k weekly visits
- Led the migration of a log viewer to S3-backed storage, reducing load times by 26% and cutting storage costs by 33%
- Drove upgrades of numerous PostgreSQL databases to enable future Django upgrades and reducing costs by 46%
- Mentored engineering interns and new grads each summer, fostering high-impact projects and successful evaluations

Meta

Fall 2022

Software Engineering Intern

- Created a proxied messaging service with an SLA of 4ms for Meta's pay button used by over 100 million users
- Contributed bug-fixes and documentation to company-wide messaging infrastructure to ease future onboarding

Bloomberg

Summer 2022

Software Engineering Intern

- Implemented a request visualization tool in C++ for a service with 200 million daily requests and an SLA of 3ms
- Introduced a request queue to make visualization requests without impacting the performance of production hosts

Amazon

Summer 2021

Software Development Engineering Intern

- Researched and developed a solution for the injection of Java Spring beans at runtime; introduced it to production, reducing time taken to onboard new ad components by 71.4% and reducing devops load by 38%

Various Startups

2019 – 2020

Software Engineering Intern

- Among the first engineering hires at multiple pre-seed startups driving prediction model integrations and full-stack projects

PROJECTS

Audio/Video Alignment Toolkit | *Python, OpenAI Whisper, ffmpeg-python*

github.com

- Implemented a video audio alignment pipeline using Whisper and ffmpeg, enabling speech transcription, frame-level timestamp mapping, and exporting structured caption metadata for integration into multimodal training workflows
- Delivered as a documented Python module and Colab demo for seamless integration into multimodal training workflows

Size.ai | *Python, Flask, PyTorch, React*

github.com

- Created a crowd size counter model that utilizes the Congested Scene Recognition Network (CSRNet) Model published in 2018 by Cornell University and deployed the model on a Flask server using AWS with 87.4% accuracy

Vault Transaction | *Python, Scikit-Learn, Flask, React*

devpost.com

- Collected website metadata and trained a Scikit-Learn model to assign a legitimacy score to online vendors
- Integrated into a Chrome extension to evaluate websites browsed by users, powered by AWS, React, and Flask

SKILLS & INTERESTS

Languages: Java, Python, C++, TypeScript, SQL, Go

Frameworks/Tools: Kafka, Maven, S3, Kubernetes, React, Node.js, Django, Jenkins

Societies: Western Artificial Intelligence Society - Software Engineer, Ivey Fintech Scotiabank Digital Lab - Software Engineer

Interests: Finance, Formula 1, Premier League, NHL
